1. Write a word under each of the pictures below to show what all living things need to survive.

FOOD

OXYGEN

WATER

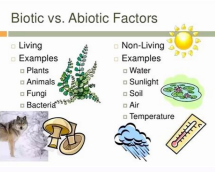

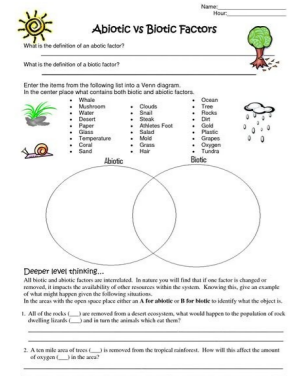

SHELTER

HABITAT

2. Use the words at the bottom of the page to fill in the blanks:

- Something which is alive, for example a plant or animal is called an **ORGANISM**
- A place where an organism naturally lives and grows is known as its **HABITAT**
- An **ECOSYSTEM** is all the interacting parts of a natural area including abiotic and biotic factors.
- **ABIOTIC** factors are non-living things including soil, air, water and nutrients.
- **BIOTIC** factors are living things found in an ecosystem and include plants, animals, fungi and micro-organisms.

GCSE Sustainability of Ecosystems Name: _____ Section: _____

Components of Ecosystems

- Consider the following questions:**
- Classify organisms as producers, consumers, autotrophs, heterotrophs, decomposers, herbivores, carnivores, omnivores, saprotrophs
 - Distinguish between biotic and abiotic factors, determining the impact of the consumers on all trophic levels during biomass/energy, stability, and diversity (3.3.2, 3.4.1)

Use the information sheets provided to answer the questions below:

1. Explain the differences between biotic and abiotic factors by completing the table below:

	Biotic Factors	Abiotic Factors
Definition		
Examples		Climate; Soil; Temperature

2. Explain the difference between producers and consumers by completing the table below:

	Definition	Examples
Producers or Autotrophs		
Consumers or Heterotrophs		
Organisms or Decomposers
